BACKGROUND AND SPECIFICATIONS/ SCOPE OF WORK PURPOSE

PURPOSE

The current LV line has reached a critical unsafe condition due to the following issues observed during inspection;

- Several wooden poles are structurally damaged and leaning.
- The aluminium conductor is loose and sagging.
- Phases are clashing during high winds and causing recurring power outages.
- The current installation no longer complies with safety and operational standards.

These conditions pose a risk of electrical faults, electrocution, fire hazards, and continued service interruptions to nearby residents.

The intention is to construct an intermediate MV and LV line and switch over customers onto newly established power line, then we can safely dismantle and remove the existing faulty LV infrastructure, including poles, conductor, and accessories. This will improve power reliability and reduce recurring outages, prevent future safety incidents related to pole collapse or phase contact, align with SANS electrical distribution standards and municipal safety compliance and reduce long-term maintenance and unplanned repair costs.
